

Why Purify Indoor Air?

Humans spend up to 90% of their time inside buildings, inhaling thousands of gallons of indoor air every day.

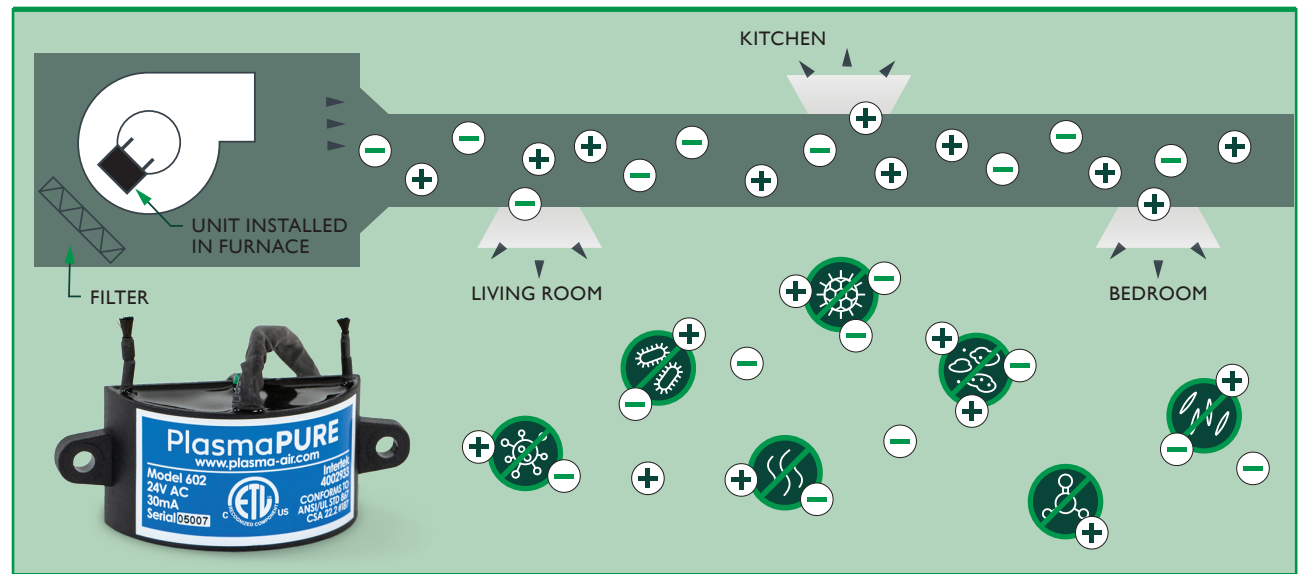

The air inside the typical home is filled with invisible yet harmful pollutants such as bacteria, viruses, mold spores, VOCs, dust, pet dander and pollen. These pollutants can trigger asthma, allergies, headaches, infections and respiratory conditions.

How PlasmaPURE Works

PlasmaPure replicates nature's process for cleaning the air by producing positive and negatively charged ions that interact with and neutralize pollutants in the air. The PlasmaPure unit fits seamlessly into your home's existing HVAC system for continuous whole-home air purification. Once installed our products are silent, invisible and worry-free — requiring little to no maintenance with weekly self-cleaning options.

Safe Haven For Your Family

PlasmaPure technology is free of harmful byproducts and safe for continuous use around your family and pets to neutralize odors, VOCs, bacteria and viruses, and reduce airborne particulate like smoke, mold spores, dust, pet dander and pollen.

Mountain Air Quality in Your Home

PlasmaPURE is always working inside your HVAC system to silently, invisibly and safely neutralize airborne pollutants.

98% Reduction of VOCs & Odors

91% Removal of Mold Spores

95% Reduction of Bacteria
